

Base coat/clear coat systems for Airlines

Leader in gloss and color retention

AkzoNobel

Tomorrow's Answers Today

Equipped with nearly a century of accumulated experience and technical know-how, AkzoNobel Aerospace Coatings offers the first reliable base coat/clear coat systems for the ultimate decorative finish.

The robust Aerobase and Aerodur paint systems require only one coat per color and one layer of clear coat for protection and a long lasting distinction of image. The new technology is expected to change the future of paint application to aircraft external surfaces.

Giant step forward in aerospace coatings

Formulated with the best performing materials available on the market, AkzoNobel's base coat/clear coat systems provide airlines with the opportunity to upgrade their livery brand image and generate excitement around their fleet. Airlines and fleet owners will no longer simply ask to have their aircraft painted, they now want the best combination of appearance and durability and flying aircraft that look 'factory-new' longer.

A unique binder formulation and a high loading of top quality pigments in the decorative base coat allow for fewer application layers per color and offer potential weight savings to the airlines.

- **Durable 'factory new' look**
- **Potential weight savings**

Leader in gloss and color retention

The entire surface of the aircraft is finished with a clear coat. The clear coat layer ensures ultimate weathering and chemical protection, unmatched color retention and produces a smooth brilliant finish.

- **Ultimate protection**
- **No color fading**
- **Durable wet look effect**

Bright colors at lower dry film thickness

Clear coat for ultimate protection, the ultimate wet look effect and strong brand integrity

aerobase **aerodur**

Environmental progressive

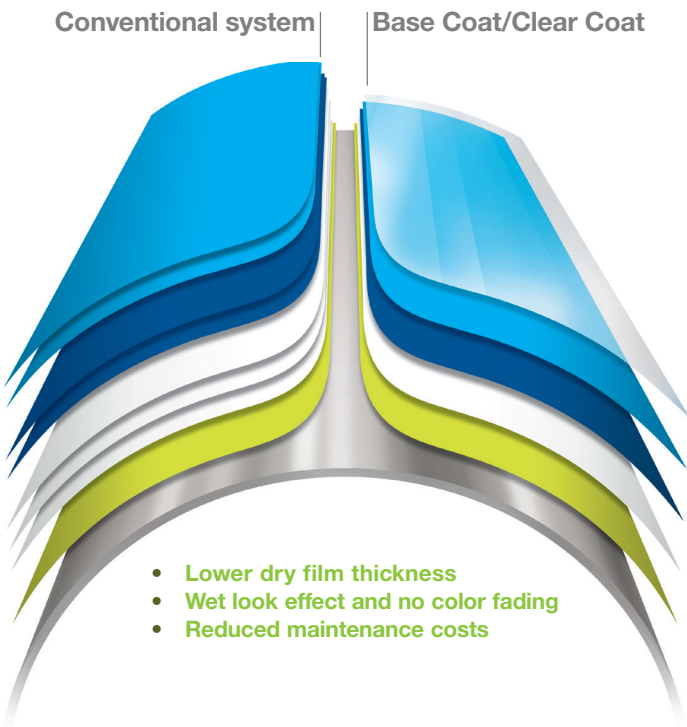

AkzoNobel's low VOC emissive base coat/clear coat systems deliver on quality and environmental friendliness and offer potential benefits to the sustainability image of the airlines. The smooth surface generates less dirt adhesion, allows for extended cleaning intervals and provides proven advantages of clean-ability. Reduced drag and potential reduction of weight of the coating system can improve in-service performance of the aircraft and will support airlines in reducing carbon emissions.

- Latest VOC compliant high solids technology
- Easy cleaning
- Reduced carbon emissions

Made to last

The Aerobase and Aerodur base coat/clear coat systems are designed to maintain brightness in color and significantly prolong the durability of the decorative paintwork. Longevity of the livery brand image reduces the need for maintenance over the life-cycle of the in-service aircraft.

- Reduced maintenance costs
- Strong brand identity
- High passenger confidence

Features:

- Extended durability
- Unique pigment/binder formulation for hiding at lower dry film thickness
- Latest VOC compliant high solids technology
- Chrome free pigmentation
- Wet look effect
- Color capability and design consultancy
- Full color range

Benefits:

- Strong brand integrity
- Eliminates appearance variability of fleet
- Reduced maintenance costs
- Lower VOC emissions
- Environmentally progressive
- Short design and implementation timelines
- Retains 'factory-new' look
- High passenger confidence

Appearance matters

The quality and durability of the finish are perceived as a reflection of the quality and reliability of the Airline. We make your brand integrity our top priority and want to keep it that way.
